DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

The abstract of the disclosure is objected to because it is longer than 150 words.

Correction is required. See MPEP § 608.01(b).

Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: "155" on page 1 line 22 and page 2 line 15.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will

Application/Control Number: 10/619,302

Art Unit: 2828

be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3, and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Shull et al. (US 6,724,486).

Regarding claim 1, Shull discloses in Fig. 1 a coherent light generating device comprising an excitation beam source 108 for generating a beam 122 polarized in a predetermined direction, a wavelength converting medium 120 having first and second end surfaces (upper right, lower left respectively) for receiving the excitation beam on the first end and outputting a wavelength converted beam 124 from the second end polarized in the same direction as the excitation beam (col. 10 lines 42-44), and first and second mirrors 106,104 at the first and second end surfaces respectively for reflecting wavelength converted light and causing resonance thereof, wherein the first and second end surfaces are oriented so that the excitation and converted beams 122,124 are incident at roughly Brewster's angle (col. 10 lines 44-46)

It is not explicitly disclosed that the polarization of each of the beams is P. However, this is inherent in Shull. As noted above, each of the beams may have the same polarization. Further,

Art Unit: 2828

Brewster face by definition is only applicable to P polarization; the faces at the Brewster angle would only prevent reflection losses if the polarization were P, therefore this must be the case in Shull, that each of the beams are P-polarized.

Regarding claim 3, the nonlinear crystal is not disclosed as having an AR coating on the faces, and indeed the entire point of the faces cut at the Brewster angle is to prevent reflection losses, therefore there is no need for an AR coating and it can be concluded that there is none.

Regarding claim 4, this method is clearly met by the structure shown in the rejection of claim 1. Note that the term "optical parametric oscillation method" is deemed to be an intended use recitation in the preamble and is accordingly not given weight.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shull in view of Byer et al. (US 5,036,220). Shull discloses the limitations of claim 1 as noted above, but does not disclose that the medium is periodically poled. Byer teaches throughout a periodically poled wavelength converting medium. It would have been obvious to one skilled in the art to utilize such a medium in place of Shull's medium so that quasi-phase matching may be provided, leading to the advantages noted in, for example, col. 1 line 64 – col. 2 line 6.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The remaining references all appear to teach a nonlinear wavelength converting crystal having faces at Brewster's angle.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Menefee whose telephone number is (571) 272-1944. The examiner can normally be reached on M-F 8:30-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, MinSun Harvey can be reached on (571) 272-1835. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
